

DigiHust Automated Lead Management System

Technical Documentation & System Evaluation Report | ID: DGH2600156

Student Name: A.Raffy	Student ID: DGH2600156
Assignment Tag: DGH2600156_A.Raffy_A01	Date: September 13, 2026
Repository: https://github.com/Raffy0-1/Automated-Lead-Management-System.git	Status: Verified & Operational

1. System Architecture & Methodology

The Automated Lead Management System is designed for DigiHust to capture, validate, route, store, and act upon incoming client inquiries in real time. The frontend is designed using vanilla HTML5/CSS3/JavaScript following the official DigiHust brand theme (light canvas, deep navy typography, sea teal highlights). Form submissions trigger an n8n cloud webhook execution orchestrating five automated backend services:

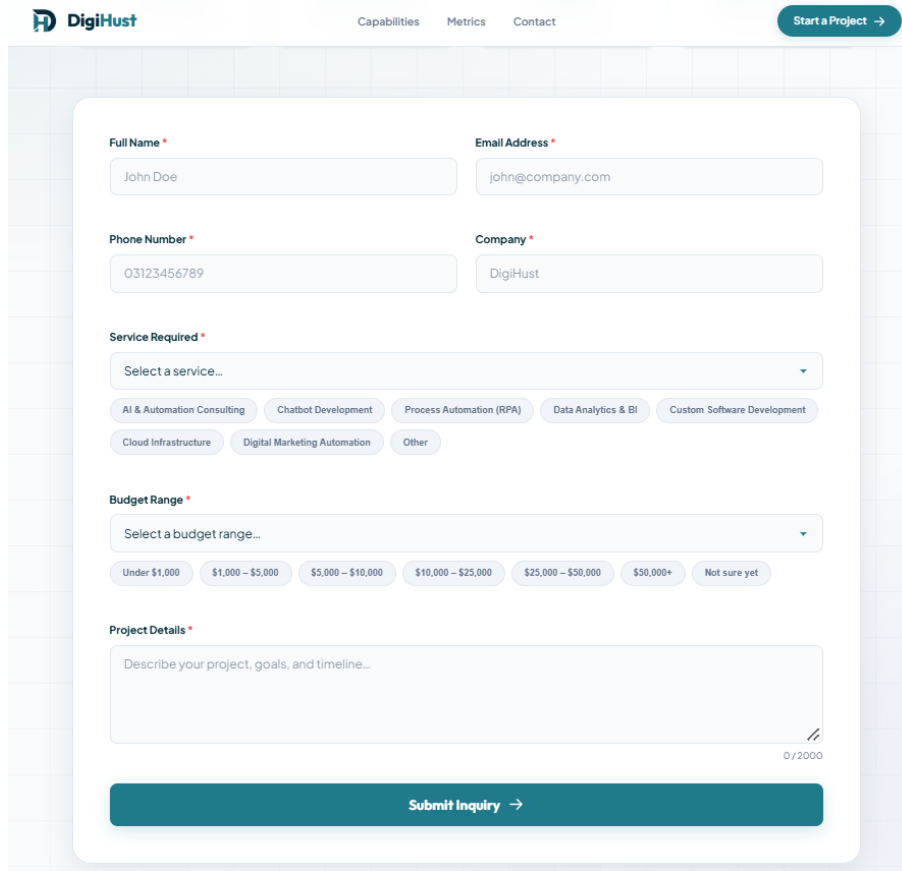

- 1. Data Validation & Formatting:** Generates a standardized Lead ID (LEAD-YYYYMMDD-XXXX), standardizes phone numbers into E.164 format, and computes lead quality scoring.
- 2. Google Sheets Database:** Evaluates incoming email addresses to prevent duplicate entries and logs full 14-column records.
- 3. Email Automation:** Sends personalized, branded HTML confirmation messages to prospects via Gmail API.
- 4. Real-Time Sales Alert:** Transmits rich embed alert cards to Discord (#leads channel) for instantaneous team awareness.
- 5. CRM Synchronization:** Creates or updates contact records in HubSpot CRM via OAuth v3 API endpoints.

2. Architectural & Integration Decisions

Key architectural decisions made during development to ensure zero security leaks, high performance, and high accuracy:

Component Layer	Design Choice & Decision	Rationale & Impact
Secrets Security	Environment Variable Placeholders	Prevents exposed API keys or tokens in public git repository exports.
Duplicate Prevention	Google Sheets Search (alwaysOutputData)	Ensures non-existent leads don't crash workflow while accurately matching existing leads.
Error Handling	Centralized Catch Node & Webhook Response	Returns clean structured JSON status (200 OK or 500 Error) back to frontend form.
UI Accessibility	Pure Vanilla CSS & SVG Vector Icons	Zero external framework dependency, fast load time (<50ms), and crisp rendering.

3. Process Screenshots & Evidence

The image shows a web form for DigiHust. At the top, there's a navigation bar with 'Capabilities', 'Metrics', and 'Contact' links, and a 'Start a Project' button. The form itself is titled 'DigiHust' and contains several sections: 'Full Name' and 'Email Address' (both with red asterisks), 'Phone Number' and 'Company' (both with red asterisks), 'Service Required' (a dropdown menu with options like 'AI & Automation Consulting', 'Chatbot Development', etc.), 'Budget Range' (a dropdown menu with options like 'Under \$1,000', '\$1,000 - \$5,000', etc.), and 'Project Details' (a text area with a character count '0/2000'). A 'Submit Inquiry' button is at the bottom.

Figure 1: High-Converting Lead Intake Web Form (DigiHust Branded UI)

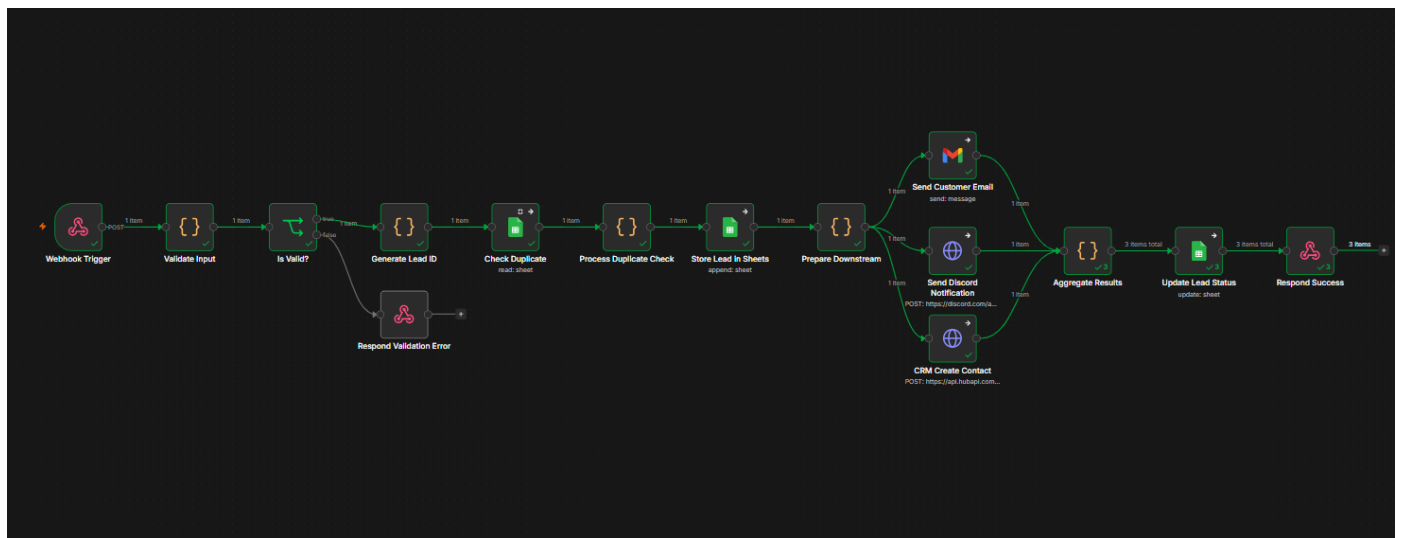

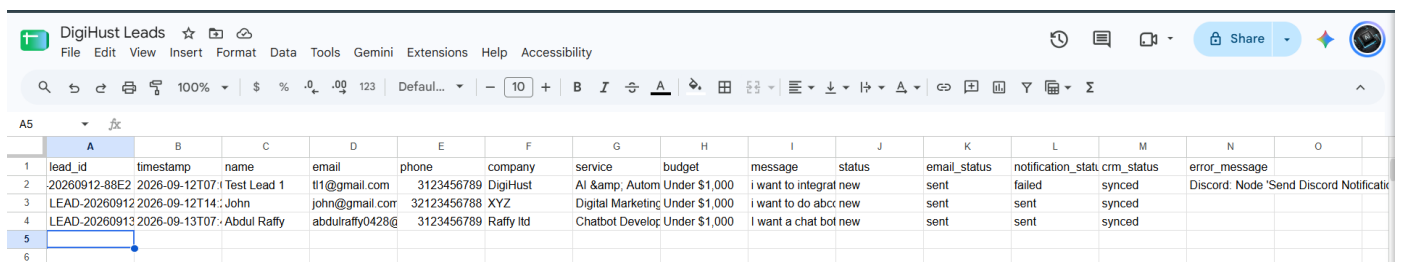

Figure 2: Complete End-to-End n8n Automation Workflow Canvas

The image shows a Google Sheets database with 14 standardized lead record columns. The columns are: lead_id, timestamp, name, email, phone, company, service, budget, message, status, email_status, notification_status, crm_status, and error_message. The data is organized into rows, with the first row being a header and the subsequent rows containing lead records.

lead_id	timestamp	name	email	phone	company	service	budget	message	status	email_status	notification_status	crm_status	error_message

4. System Evaluation & Requirements Verification

Requirement Component	Implementation Method	Verification Status
Intake Form UI	HTML5/CSS3/JS, Custom Pills, Rounded Favicon	Passed (HTTP 200)
n8n Webhook Trigger	HTTPS Trigger Node with Lead ID Generator	Passed
Google Sheets Storage	Lookup & Append Row (14 Columns)	Passed
Email Notification	HTML Template via Gmail Node	Passed
Discord Sales Alert	Webhook Embed to #leads Channel	Passed
HubSpot CRM Sync	OAuth v3 Contact Creation API	Passed
Security & Compliance	Sanitized Workflow Export (Zero Secrets)	Passed
