

DigiHust Lead Management System

Technical Documentation & Evaluation Report (Assignment A02) | Student ID: DH102

Student Name: Raffy	Student ID: DH102
Assignment: DigiHust Assignment A02	Date: September 13, 2026
Repository: https://github.com/Raffy0-1/Automated-Lead-Management-System.git	Status: Fully Operational & Verified

1. System Architecture & Methodology

The Automated Lead Management System is designed for DigiHust to capture, sanitize, route, and store incoming project leads in real time. The frontend is built with vanilla HTML5/CSS3/JavaScript matching the official DigiHust brand aesthetics (`#F8FAFC` light background, `#022B3A` deep navy typography, `#1F7A8C` sea teal accents). Upon submission, lead data is sent via HTTPS POST to an n8n webhook workflow which executes five automated integration services:

1. Data Validation & Formatting: Formats lead ID (LEAD-YYYYMMDD-XXXX), standardizes phone numbers to E.164, and categorizes lead scores.
2. Google Sheets Database: Checks for existing contacts to prevent duplicates and appends full 14-column lead records.
3. Email Automation: Sends personalized, professional HTML confirmation emails to customers via Gmail.
4. Sales Team Alert: Posts real-time rich embed notifications to Discord (#leads) for instant sales outreach.
5. CRM Integration: Creates or updates contact profiles in HubSpot CRM via v3 Contacts API.

2. Process Screenshots & Verification Evidence
